Forensic Science online

Taking CM8002 Forensic Science in Semester 1 (3 AU)
CBC has offered Forensic Science since 2005 as a GER and UE course. This will continue, except that, starting in AY2014-15, CM8002 will be offered partially online. It will be a hybrid course using both new technology and traditional methods.

The course will have three components:
Concept and application lectures given by NTU faculty: these will be (mostly) delivered online through NTU Learn.
Guest lectures given by local Forensic Science experts. These will be in the Auditorium. These lectures will not be recorded.
Face to face interaction with NTU lecturers: details will be announced in NTULearn.
Assessment will be a combination of a mid-term test and a final exam. Full details of the course structure will be available on NTULearn to registered students.

Taking CM8012 in Semester 2 (2 AU)
The course is delivered and assessed online through NTU Learn. Registration will be in the normal way. Credit transfer from Coursera is now longer possible.

Taking CM8022 in Semester 1 (1 AU)
This course is available to students who have previously taken CM8012 online. However, students should recall that there is no guarantee of a place due to limited capacity. Students should also note that most lectures for CM8022 are not recorded. Students should also note that the assessment for CM8022 will also cover the content of CM8012 because it is in common with CM8002.

Important
Students who have taken CM8002 may not take either CM8012 or CM8022 and vice versa.

Satisfying the STS/UE requirement
Completion of either CM8002 or CM8012 plus CM8022 will do this. Students who have taken CM8012 and do not plan to use Forensic Science to satisfy the GER STS requirement, do not need to take CM8022.
