Construction of Multisubstituted Cyclic Compounds by Using Palladium and Sulfur as Key Elements

Many multisubstituted cyclic compounds are known to be useful, but constructions of these skeletons as well as installation of substituents are laborious and thus to be improved. In this talk, the following topics will be presented: 1) Synthesis of multisubstituted heteroaromatics from ketene dithioacetal monoxide under Pummerer conditions and its application to material science, 2) Palladium-catalyzed arylative cyclization of propargyl- and homopropargylmalonates

Date:	18th December 2012 (Tuesday)
Time:	11:00am – 12:30pm
Venue:	NTU SPMS CBC Building Level 2, Conference Room
Host:	Assoc Professor Shunsuke Chiba
