Professor Kim Janda
The Scripps Research Institute

Merging of Chemistry and Biology: In Search of Molecules with Translational Function

This lecture will illustrate the opportunities that lie at the interface of biological chemistry by describing a series of examples, including developing vaccines for treating heroin abuse, cell-to-cell communication within bacteria and how some of these quorum-sensing molecules display a symbiotic relationship to cancer immunosurveillance as it relates to TRAIL's apoptotic pathway.

Date:	12th January 2017 (Thursday)
Time:	11:00am – 12:30pm
Venue:	SPMS MAS Executive Classroom 1
Host:	Asst Professor Steve Zhou
